

EPSON IMPROVES WAREHOUSE MANAGEMENT WITH DBMOTO

One of the largest overseas subsidiaries of the Japanese Seiko Epson Corporation, improves warehouse management with DBMoto

Background

EPSON PRECISION (HONG KONG) LTD is one of the largest overseas subsidiaries of the Japanese Seiko Epson Corporation. It is a manufacturing company, with more than 30 years history in Hong Kong. Epson Precision Hong Kong was formed in June 1986 through a merge of two subsidiaries of Seiko Epson Corporation.

Epson Hong Kong is also a subsidiary of Seiko Epson Corporation in Japan. It handles marketing, sales and customer service of the South Asian Pacific region.

Platforms

iSeries/AS400, Windows 2000 and Solaris

Case Problem and HiT Software Solution

Epson needed to reliably replicate their iSeries/AS/400 data to their Oracle subsystem databases for their Warehouse Management Project. This project consists of front-end barcode data collection devices to cover "receiving," "stock in," and "transfer" warehouse functions. This data is uploaded to a middle tier Oracle database. Using DBMoto, the data is then replicated to a backend iSeries/AS400 database.

Product Functionality

DBMoto performs refresh and real-time data replication for enterprise server and desktop replication needs. All major database platforms such as IBM DB2 UDB (including iSeries/AS400

and zOS), Oracle, Microsoft SQL Server, Microsoft Access, Sybase Adaptive Server Enterprise, and MySQL are supported.

Product Strength

- Reduced solution development time
- Shortened overall project schedule
- Excellent technical support services
- Data interface & replication setup using DBMoto is significantly faster than programming the data interface using standards such as JDBC / ODBC in house

Customer Support

"Hit Software provided us with the best AS/400 DB2/400 to Oracle replication tool at an affordable price. We were most impressed by their professional support service."

– Johnny Ip
Systems Analyst, Epson Precision (Hong Kong)
